

Ryan O'Connor from Warner Fences Auckland East & South has recently worked with the developers of The Gardens subdivision to provide 180m of custom balustrading. A custom solution was required to accommodate the varying and multiple turns and angles of the existing retaining wall that the balustrade needed to follow. The project had over 18 different raking angles across the 180m making it a unique project for the team at Warner's. The care and organisation taken during the site measure ensured that the balustrade panels were able to be manufactured to perfectly fit the various contours and levels of the site. Because Warner manufacture all of our products here in New Zealand, we can deliver custom solutions efficiently and work with our customers to provide exactly what they require. For this site, the developers wanted a practical solution that provided safety while still being stylish and modern. Ryan and his team delivered and meet this brief both on time and on budget.

## Case Study – The Gardens Subdivision

# WARNER.

Fences. Path & driveway gates. Auto-gate openers. Balustrades.
